NHDS and CXR announce a strategic partnership to deliver end-to-end remote monitoring solutions in France.

New Hampshire Digital Services has entered into a strategic partnership with CXR Anderson Jacobson (France) to offer a range of end-to-end remote monitoring and host software solutions to the French marketplace. The partnership complements CXR's current products in the field of 'Transmission and Network Access solutions' with the NHDS 'Messenger' range of products, designed to give operational visibility to remote and often mission critical assets. In return NHDS will benefit from the cutting edge technology developed by CXR and its associate companies within Microtel International Inc. NHDS and CXR have worked together for over 10 years bringing together their design and development expertise in the communications sector. A clearly visible example of the long-standing relationship was the joint development and production of sign drivers for the Variable Message Signs, currently being installed throughout Britain's motorway network.

About Messenger

The product range, developed on an open platform, provides users with a low cost entry-level product that can easily be expanded to address more sophisticated and bespoke, future requirements.

Functionality allows digital and analogue inputs to be monitored and reported in real time to a host PC, mobile phone or (through integration) to an existing enterprise or SCADA system. Messengers communicate using the GSM data networks and are powered by either mains supply or NHDS's unique integral lithium battery pack, to deliver 10 years of maintenance free operation. A meter reading/pulse counting function can be added along with an interface to other equipment via a serial port.

About CXR

Formed in 1974 as a fully owned subsidiary of Anderson Jacobson Inc., now Microtel International Inc., CXR is a leading European manufacturer and supplier of Transmission and Network Access products to be used in a wide spectrum of applications. Product portfolio includes analogue, ISDN, DSL and fiber optic modems, CSU/DSU, terminal and remote access servers and a full range of access and concentration routers. CXR products are marketed in France and in the EMEA zone via a network of value added distributors/resellers and in the USA, via it's sister company CXR-Telecom

About NHDS

Formed in 1991 New Hampshire Digital Services are an application based engineering company providing design and development expertise in the communications sector. Originally formed to take advantage of the emerging public domain mobile data networks (Mobitext, Paknet, Infotac), the product range has evolved to utilise GSM, GPRS and GPS technology. In 1995 this expertise was called upon by the regional Electric Companies to provide a solution to monitor power outage and distribution faults on high voltage power lines in remote areas
